

Performance of Tilted Inner Barrel

Giovanni Bianchi, Kamil Cichy, Stefano
Martina, Antti Onnela, Stefano Mersi
1 April 1st 2014
CMS Upgrade Workshop

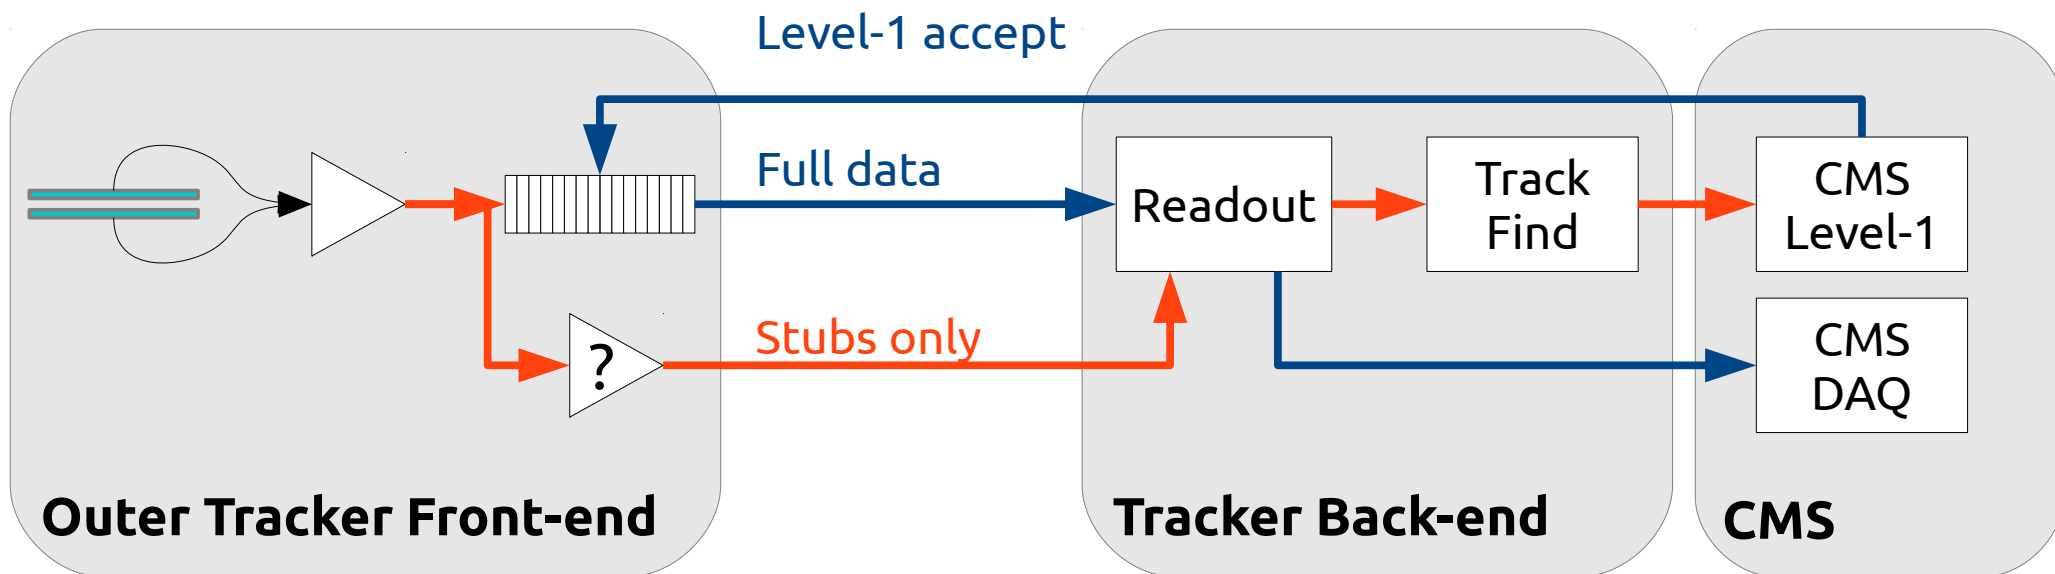

Providing tracks for trigger

Readout architecture

Tilted barrel performance
CMS Upgrade Workshop 2014 2

Level-1 “stubs” are processed in the back-end

Form Level-1 tracks, p_T above ~ 2 GeV,
contributing to CMS Level-1 trigger

@ 40 MHz – Bunch crossing

@ > 500 kHz – CMS Level-1 trigger

Module design

Only two module types

Tilted barrel performance
CMS Upgrade Workshop 2014 **3**

2 Strip sensors

Strips: 5 cm × 90 μm

Strips: 5 cm × 90 μm

P = 2.7 W

~ 92 cm² active area

For r > 40 cm

Pixel + Strip sensors

Strips: 2.5 cm × 100 μm

Pixels: 1.5 mm × 100 μm

P = 5.0 W

~ 44 cm² active area

For r > 20 cm

About the same weight

Tracker Layout

Tilted barrel performance

9

PS modules

Face-to-face connection

Tilted barrel performance 10
CMS Upgrade Workshop 2014

PS modules

Side-to-side connection?

Tilted barrel performance
CMS Upgrade Workshop 2014

11

Through-silicon VIAs would be needed to allow for cross-side communication

Stub coverage

On a module with no TSV

Without an interconnect technology between the two sides of the module, tracks crossing the middle will not be identified as stubs

Flat

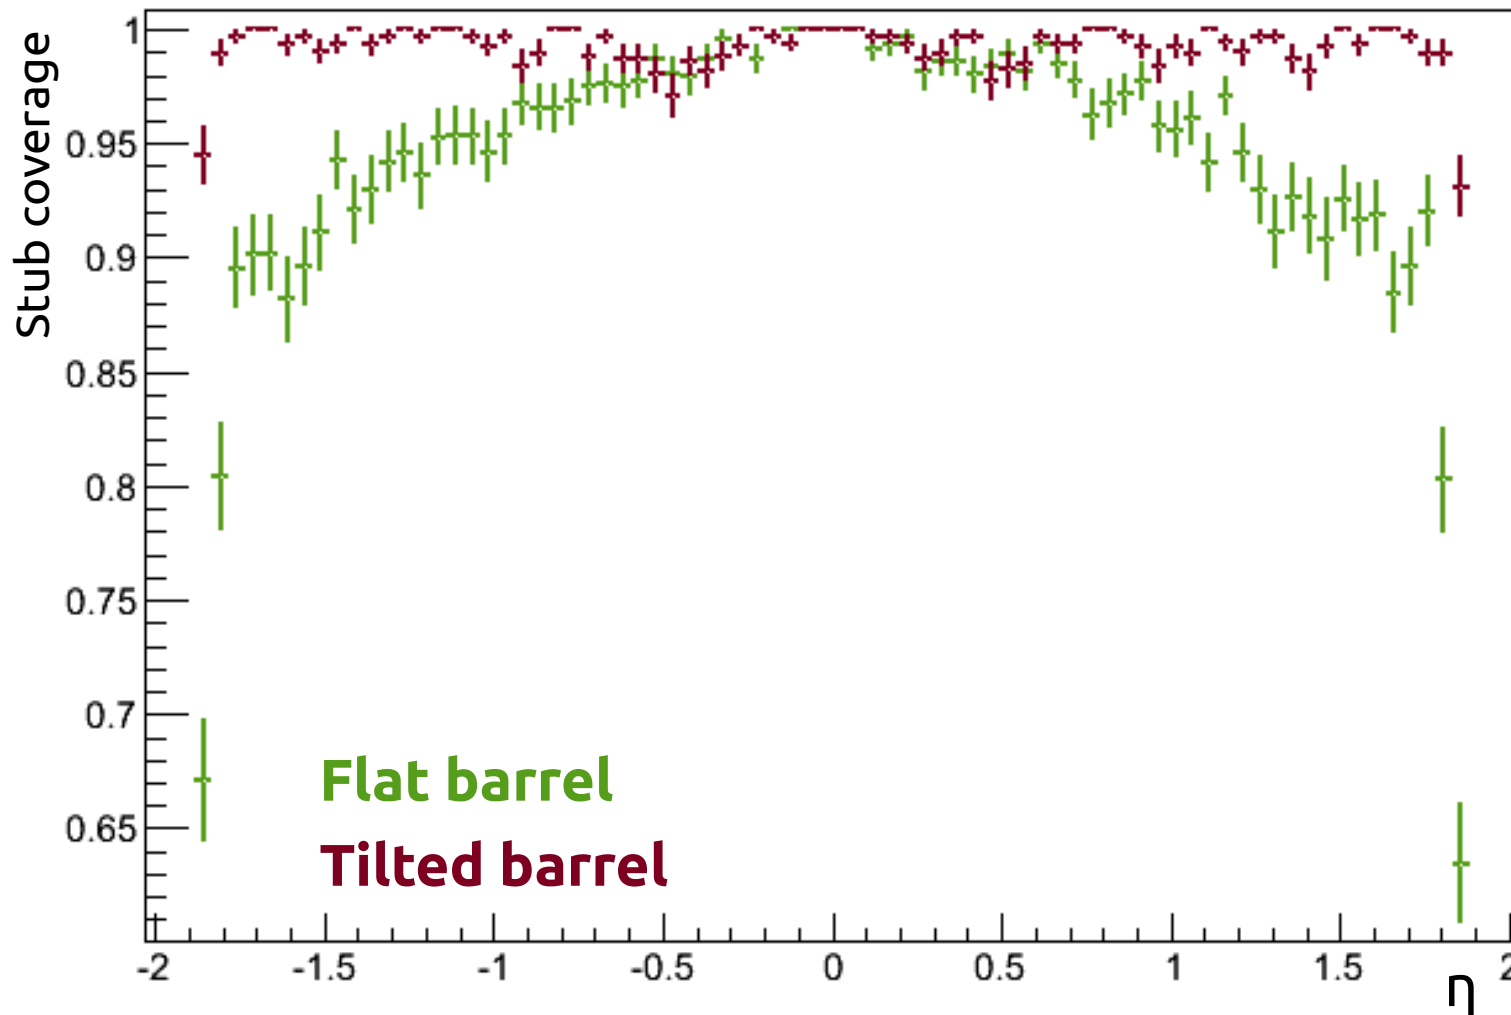

Tilted

Stub coverage

Layer 1 as example

Probability of catching ≥ 1 stub from high-pT track in Layer 1 assuming no through-silicon VIAs

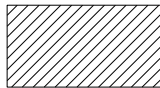

Material in Tracker

Tilted barrel performance
CMS Upgrade Workshop 2014 14

Material Budget in radiation length

-  CMS Phase-1
-  CMS Phase-2 Flat
estimate, if keeping ~ phase-1 pixels material
-  CMS Phase-2 Tilted
estimate, if keeping ~ phase-1 pixels material
-  Phase-1 Pixel

Material in Outer Tracker

Tilted barrel performance

Tilted Inner Barrel

Material in Inner Barrel

Tilted barrel performance
CMS Upgrade Workshop 2014

17

Material in Inner Barrel

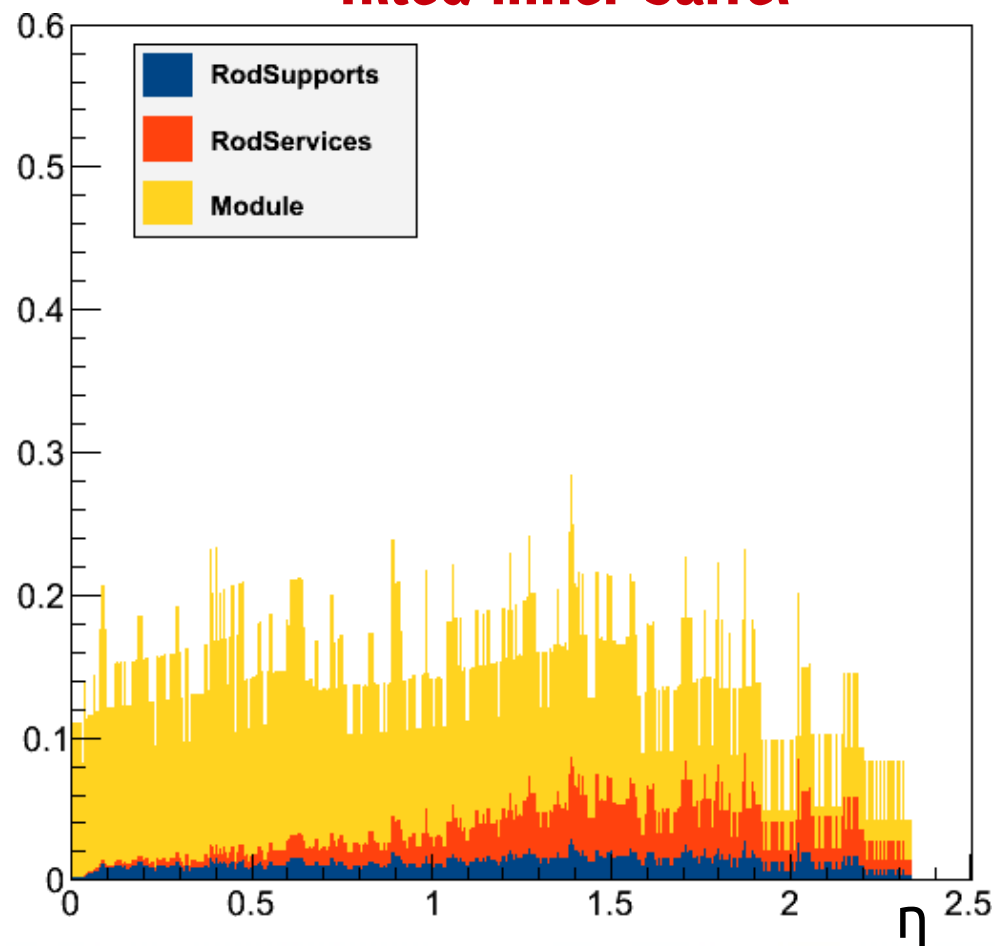

Tilted barrel performance
CMS Upgrade Workshop 2014 18

Tilted barrel has less material because seen by tracks of the number of modules and their optimal orientation

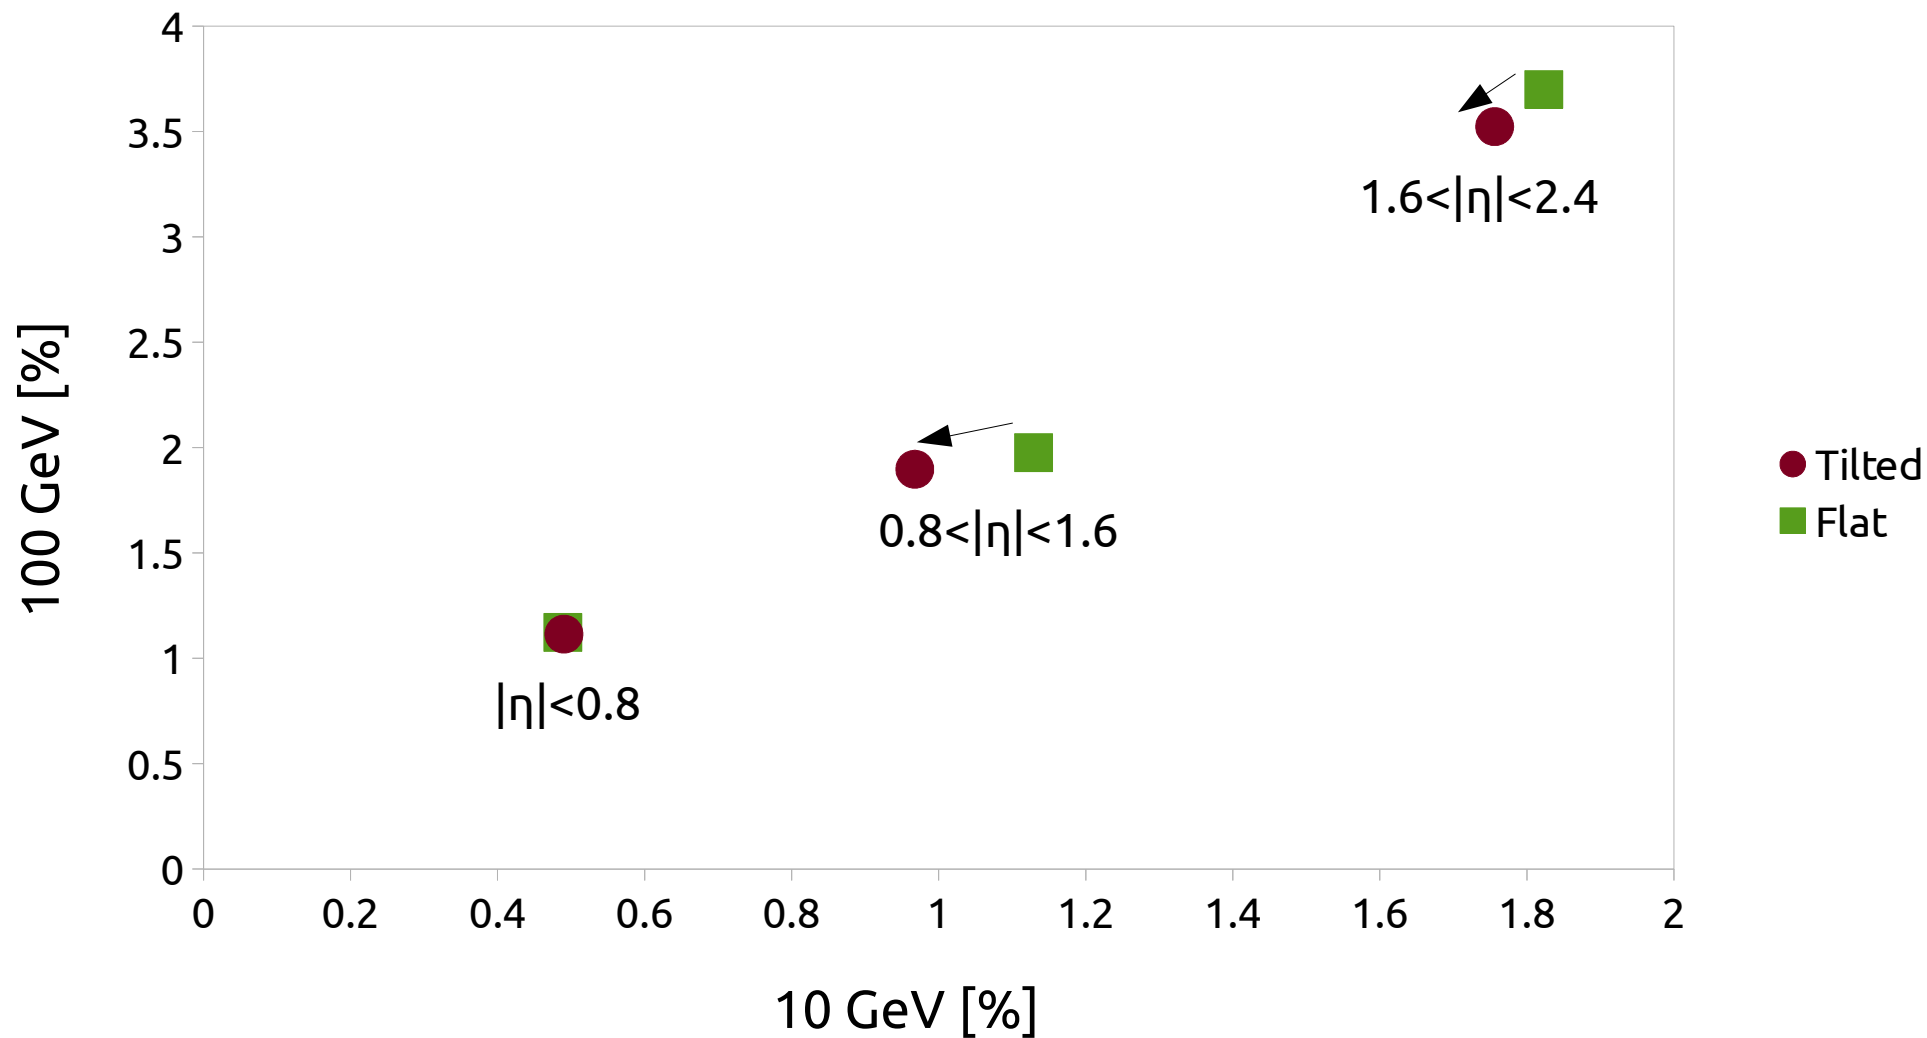

Flat inner barrel

Tilted inner barrel

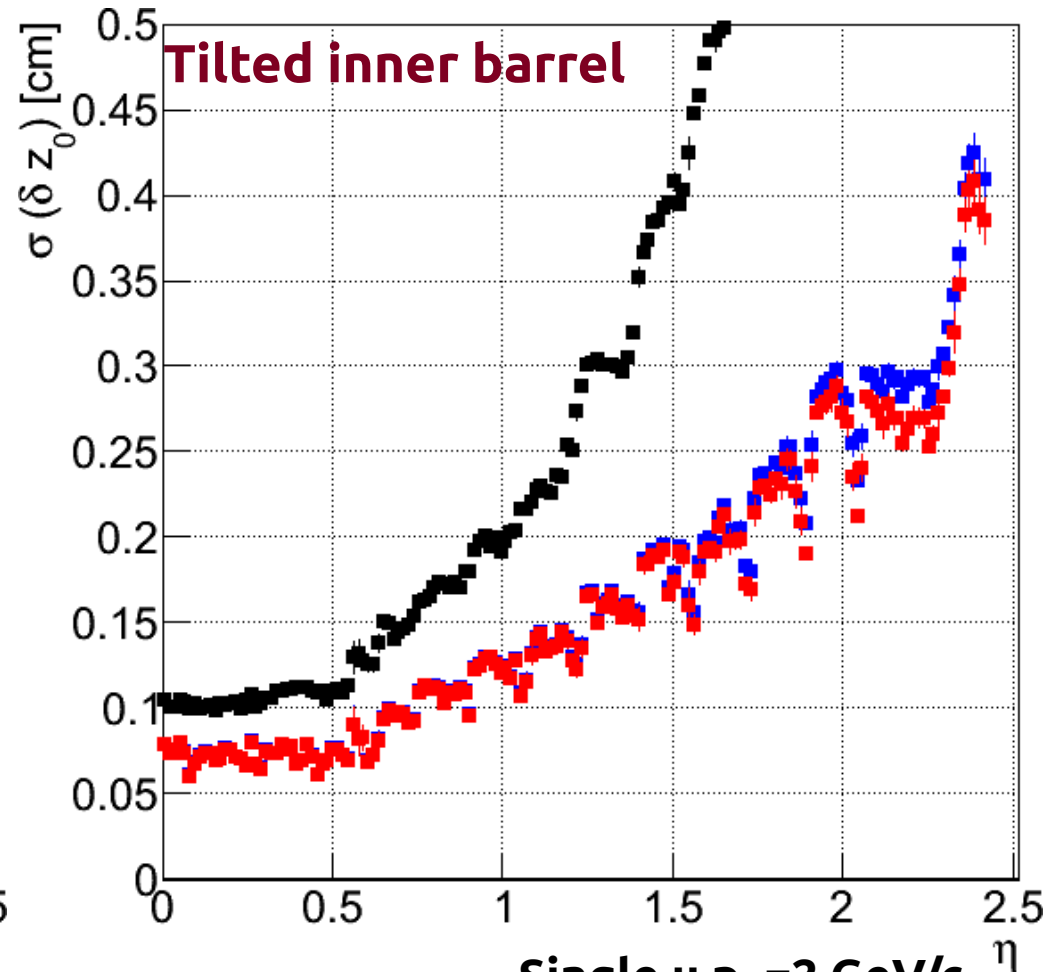

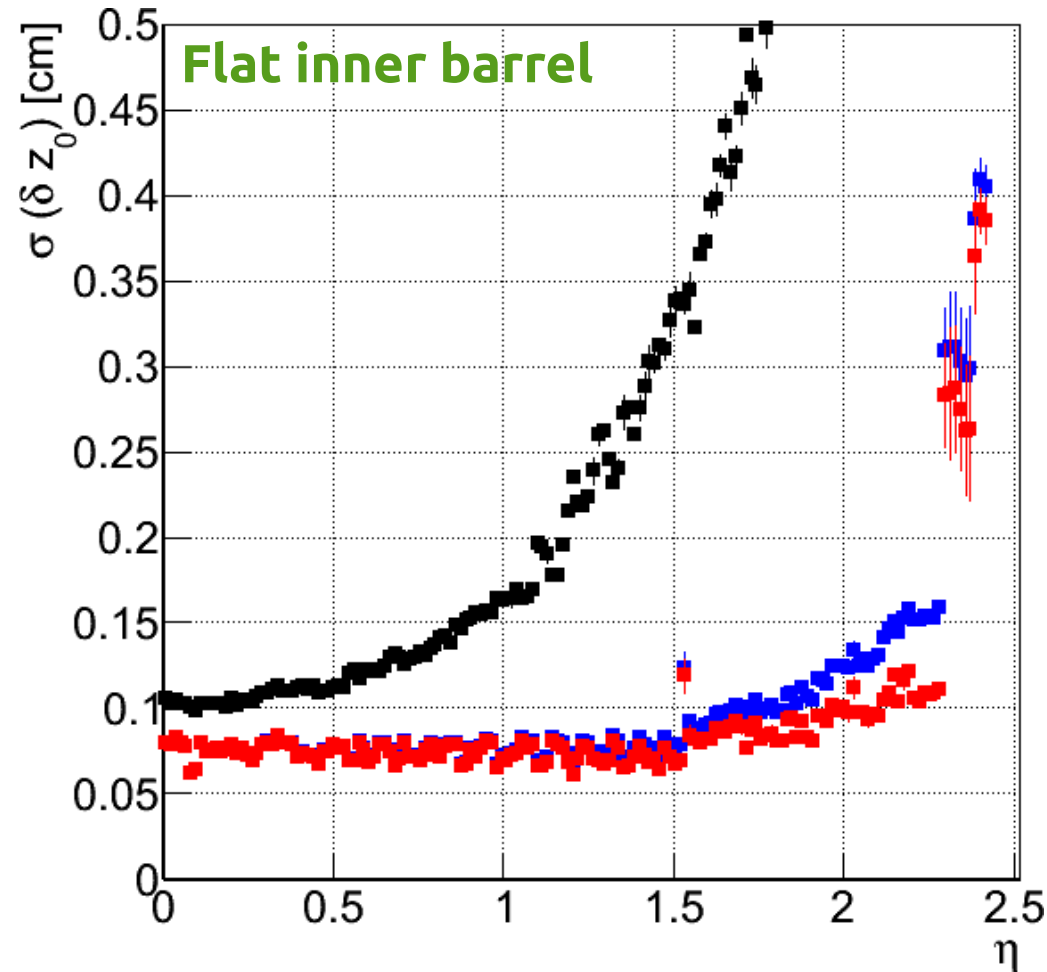

pT resolution

Track-trigger resolution

Potential z_0 resolution using all stub info

Tilted barrel performance
CMS Upgrade Workshop 2014

Challenge for L1-track finding:
finding precise tracking information

Single μ $p_T = 2$ GeV/c
Single μ $p_T = 10$ GeV/c
Single μ $p_T = 100$ GeV/c

Track-trigger resolution

A small digression

Tilted barrel performance
CMS Upgrade Workshop 2014

21

The difference in z_0 resolution derives from the sensitive element orientation leading to a tighter constraint on the track direction

Track-trigger resolution

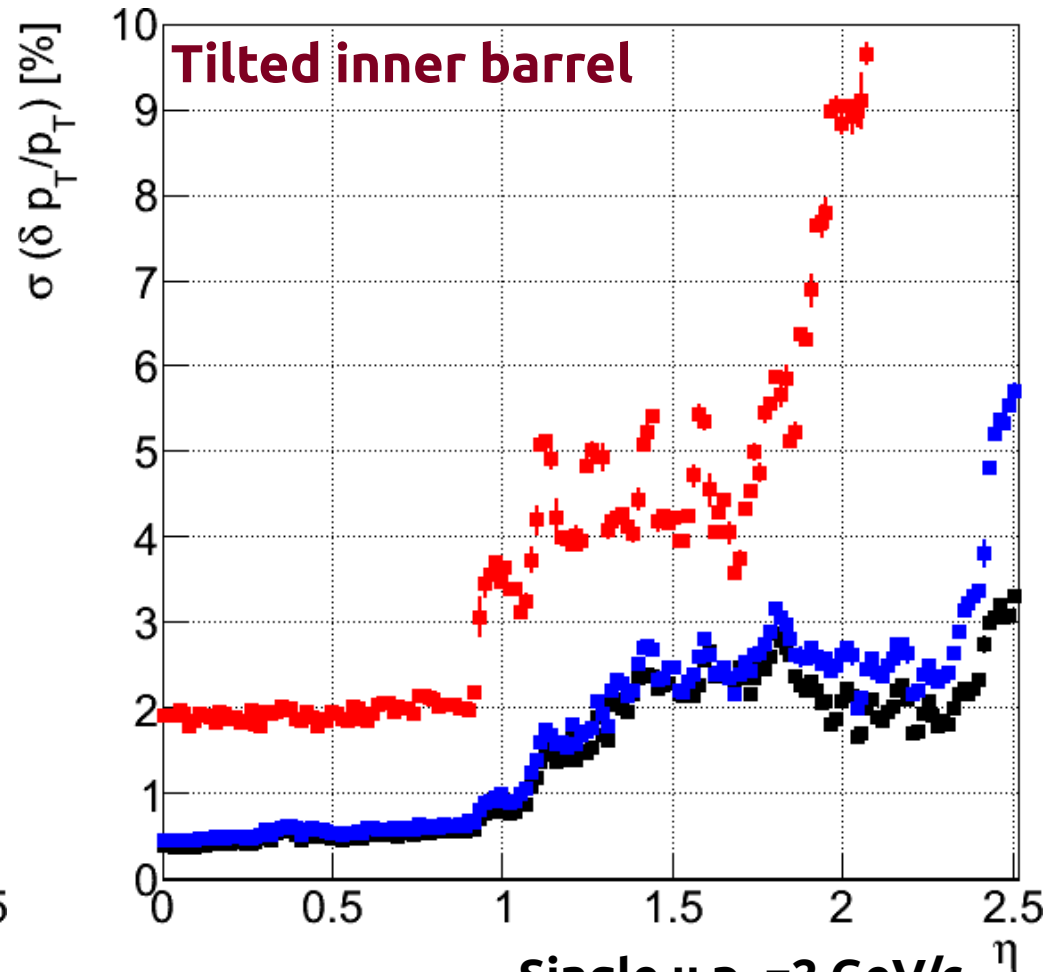

Potential p_T resolution using all stub info

Tilted barrel performance
CMS Upgrade Workshop 2014 22

Almost identical resolutions

Challenge for L1-track finding:
finding precise tracking information

Single μ $p_T=2$ GeV/c
Single μ $p_T=10$ GeV/c
Single μ $p_T=100$ GeV/c

Track-trigger resolution

Tilted barrel performance
CMS Upgrade Workshop 2014 23

Conclusions on tilted barrel

Cons:

- Has a lower potential for z_0 resolution in L1 tracking
 - $p_T \sim 10$ GeV/c: $(0.7 \rightarrow 2.4)$ mm vs $(0.7 \rightarrow 1)$ mm

Pros:

- Stub finding coverage
 - More flexible
 - No need of through silicon VIAs
- Has a potential for a large material reduction in the inner barrel
 - -40% to -70% radiation lengths in intermediate and forward η regions
 - Consequently less particle interactions in inner barrel
- Cost saving (3 to 5 MCHF)
- Achieves $\sim 20\%$ better resolution at low p_T in the intermediate $0.8 < |\eta| < 1.6$ region

A photograph of water cascading over a dam with multiple spillways. The water is white and frothy as it falls, creating a large, dark, turbulent pool below. The text 'Thank you!' is overlaid in a bright yellow-green color in the center of the image.

Thank you!

Module design

Only two module types

Tilted barrel performance 26
CMS Upgrade Workshop 2014

Hit correlation in different chips

Cms Binary Chip (CBC)

strip readout
+ correlation

Readout only

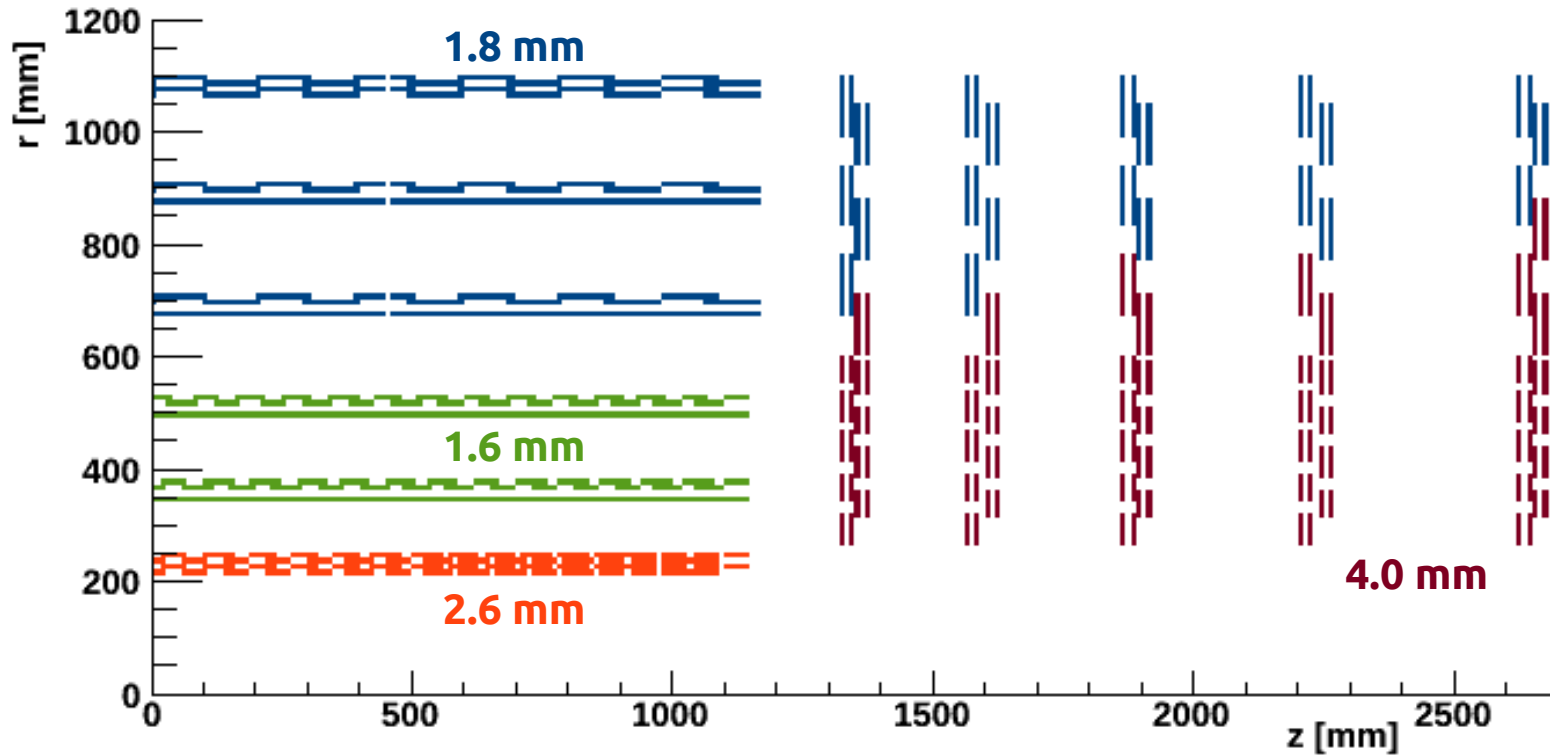

MacroPixel ASIC (MPA):

pixel readout
+ correlation

sensor spacing

must be tuned along with search windows

Radiation map

CMS Upgrade Workshop 2014 28

CMS Preliminary Simulation
2012 FLUKA geometry

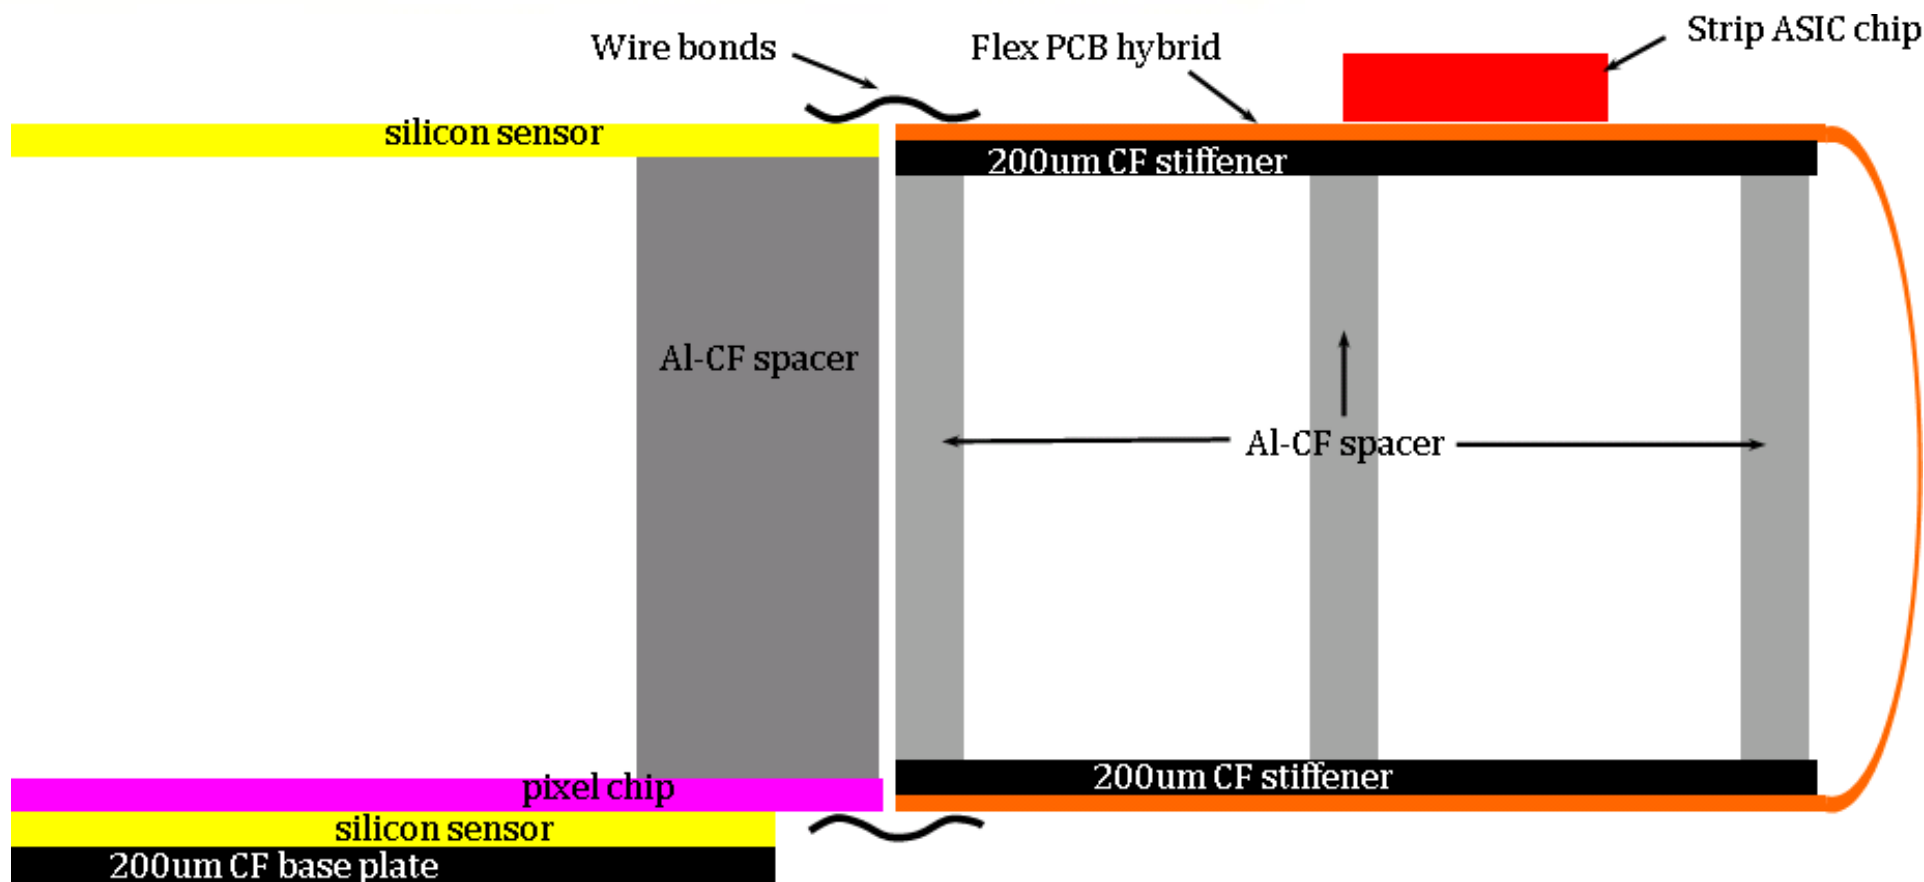

CMS protons 7TeV per beam
Dose at 3000.0 [fb^{-1}]

FLUKA nominal geometry 1.0.0.0

PS modules

Tilted barrel performance
CMS Upgrade Workshop 2014 29

Flex hybrid:

- Technology leap
- Key element for 2-sensor design

2S modules

Tilted barrel performance
CMS Upgrade Workshop 2014 30

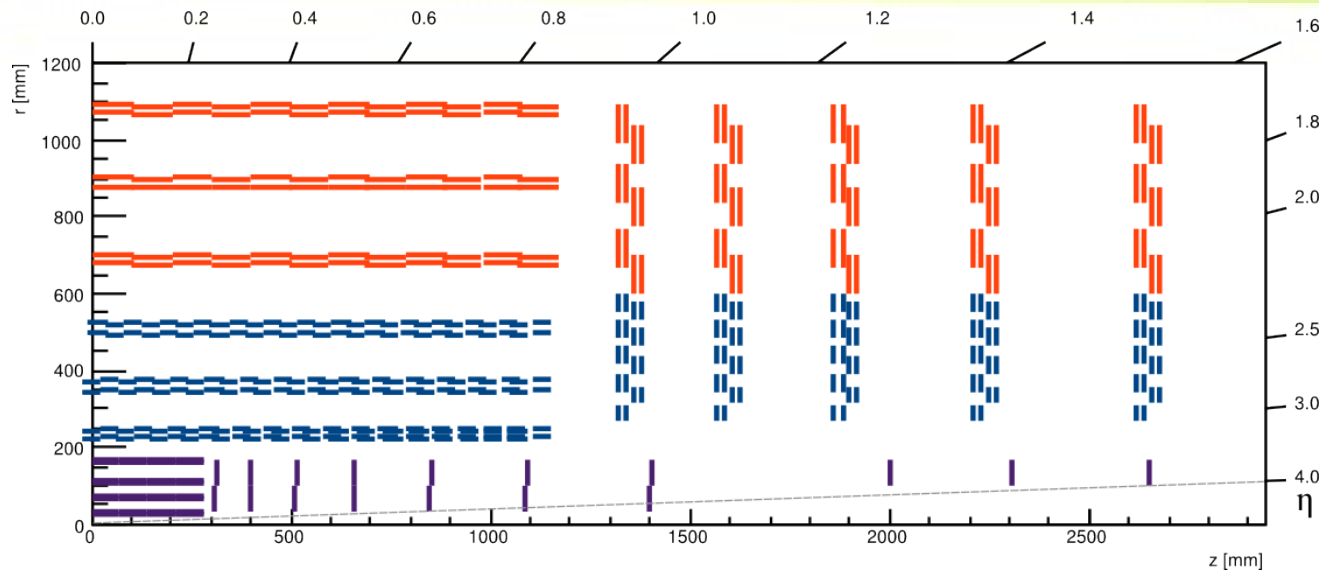

Flex hybrid:

- Technology leap
- Key element for 2-sensor design

Layout

Current baseline

Tilted barrel performance 31
CMS Upgrade Workshop 2014

- **×4 granularity** in strip sensors
- +3 layers of MacroPixel sensors
 - Unambiguous **3D coordinates** helps track finding in high pile-up
- Up to **10 points** available for track-trigger up to $\eta=2.5$
 - Comparable to current tracker's coverage, **but at L1**

10 trigger hits $\rightarrow \eta=2.5$

Layout

Current baseline

Tilted barrel performance
CMS Upgrade Workshop 2014 32

- **×4 granularity** in strip sensors
- +3 layers of MacroPixel sensors
 - Unambiguous **3D coordinates** helps track finding in high pile-up
- Up to **10 points** available for track-trigger up to $\eta=2.5$
 - Comparable to current tracker's coverage, **but at L1**
- Hit coverage up to **$\eta \approx 4$** at L1A

Uniform cut

Possible, with tuning

(@construction)

(@front-ends)

Need to tune **sensor spacings** and **hit matching windows** are required to maintain uniform p_T cut

pT modules

Providing "stubs" for tracking trigger

Tilted barrel performance
CMS Upgrade Workshop 2014 **34**

Need to ship hits off detector

Ship all hits @ 40 MHz? No

- Bandwidth needed: off by 1 order of magnitude (order of 10 Gbps per module)
- Track reconstruction ~ impossible

Solution: ship only high-pT hits (stubs)

- Threshold of ~ 2 GeV
- Data reduction of one order of magnitude or more

Modules with pT discrimination ("pT modules")

Tracking resolution

p_T resolution of single muons

Tilted barrel performance
CMS Upgrade Workshop 2014 35

Clear improvement expected in the whole p_T range

Track-trigger resolution

A small digression

Tilted barrel performance 36
CMS Upgrade Workshop 2014

The difference in z_0 resolution derives from the sensitive element orientation leading to a tighter constraint on the track direction
